FAYE MALARKEY BLACK

PRESIDENT, REGIONAL AIRLINE ASSOCIATION

Friends of RAA:

The year 2017 has flown by – literally and figuratively -- and you will see that reflected in the pages ahead. We hope you find this annual report valuable.

RPMs and ASMs reached an all-time high in 2016 for all U.S. airlines, but the regional sector did not produce record-breaking figures. As RPMs and ASMs ticked up, load factor decreased because ASMs increased more than RPMs year-over-year. Meanwhile, seating capacity aboard regional aircraft continued its climb. In 2016, the average seating capacity of a regional aircraft was 62 seats, up from 51 just ten years ago.

Ultimately, our industry operated fewer flights but on larger aircraft traveling longer distances last year. We carried fewer passengers, with enplanements dropping again in 2016. Schedule reductions, market exits, and reduced frequency have accompanied this trend. Between 2013 and 2017, 174 airports lost at least 20 percent of their departures, 65 airports lost at least half, 26 airports lost at least 75 percent of their air service, and 20 airports went dark. Notably, these service reductions took place during a period of economic recovery, where communities would ordinarily expect to gain destinations and frequency.

This marks a new reality for small and medium-sized communities, and the primary driver for this industry contraction is a growing pilot shortage. Without immediate intervention, this crisis will worsen as major airlines prepare to hire the equivalent of the ***entire*** regional airline pilot workforce within the next three years alone, in order to keep pace with retirements and growing air service demand.

Regional airlines are working now to attract and support the next generation of aviators, making significant compensation and other workforce investments. Airlines have worked with partners to expand flow programs, which assure even greater career stability and help pilots achieve a high return on their training investment. In fact, according to Brown Aviation Lease, a pilot's ROI ($33 for every one dollar spent on training) is higher than even that of a doctor or lawyer. Unfortunately, the cost of pilot training is also high, and recent regulatory changes have added additional expense, pushing this lucrative career out of reach for many aspiring pilots.

With your help, we can fix that. RAA is petitioning Washington officials to facilitate approval of additional, safety-enhancing structured training pathways, complementing those in place today. These pathways help to bring the career path within reach for more Americans. Even more importantly, they enhance safety over the status quo by adding additional training that incorporates rigorous screening, testing, academics, audits, and extensive use of technology, such as high-fidelity simulators, to prepare pilots for scenarios they do not presently encounter while accumulating unsupervised flight hours.

While these industry-invested training solutions are the key to a solution, policymakers could add an additional layer of support by expanding student loan coverage for flight training, initiating loan forgiveness and forbearance programs for pilots, increasing GI bill flexibility, establishing tax incentives for employer-based programs, and continuing to envision creative pilot programs like the DOT's Forces to Flyers initiative. This much is clear: demand for air travel continues to grow, and as long as we allow high barriers of entry to block pilots from the career path, the supply of pilots will not keep pace.

While pilots make headlines, airlines are also confronting a shortage of skilled maintenance technicians and are implementing innovative recruitment and retention programs to maintain their workforce. These efforts include internships and apprenticeships as well as increased outreach to high school students promoting aviation opportunities. Concurrently, the long-anticipated revision of 14 CFR Part 147 (Aviation Maintenance Technician Schools) is expected to align today's technological advancements with certification standards while also incorporating competency-based technician training programs. These initiatives are key components of a long-term technician workforce solution.

2018 will also see us working with policymakers to help modernize and reform our nation's Air Traffic Control system in a way that protects the small and medium-sized communities who depend on regional airlines for air service. RAA is ready to roll up our sleeves and help advance meaningful ATC modernization. At the same time, we take our commitment to America's small and rural communities seriously and will continue to defend their access to air service.

While prevailing proposals prohibit the restriction of any system user's access, protections against potentially massive cost increases are needed to ensure meaningful protection for smaller communities, who could otherwise be priced out of the market. RAA has modeled dozens of realistic funding scenarios likely under a non-governmental ATC. Each scenario carried significant tax increases for travelers from smaller communities. Because these less dense routes can only be served by smaller aircraft, fewer passengers mean higher individual exposure to these cost increases.

Ironically, communities at highest risk under potential ATC cost increases are among those already impacted by the pilot shortage. It is important that we address these issues and keep these communities, and the regional airlines that serve them, in business.

I hope, as you look through these pages, you will gain a renewed appreciation for the vital role today's regional airlines play in our global transportation network. There is no such thing as "flyover country" for regional airlines -- there never will be. We need your help to ensure we can continue landing in communities large and small, offering the safe and reliable air service every corner of North America has come to rely on to connect with the global economy.

I look forward to working together next year and into our strong, shared future.

FAYE MALARKEY BLACK

BRYAN BEDFORD
CHAIRMAN OF THE BOARD,
REGIONAL AIRLINE ASSOCIATION

To the regional airline community:

Our business represents a substantial economic engine. We employ approximately 59,000 individuals and operate 42 percent of all scheduled departures in the United States. We serve nearly every U.S. airport that offers scheduled service, and for two-thirds of them, RAA members provide the community's only scheduled service. It's a rare moment when there isn't one of our aircraft aloft, safely and efficiently carrying passengers and cargo to their destinations. On our flight decks and in our cabins, our hangars, offices and ramps are some of the most highly trained, highly competent aviation professionals in the world. This annual report reflects the scope and impact of what our members do every day; it should be a source of pride for the people who make those accomplishments possible.

At the same time, however, we continue to face headwinds, and that, too, is reflected in these pages. Foremost, we face a critical shortage of qualified pilots that, unless addressed, will have a dramatic effect on our prospects and our continued ability to contribute to the nation's economic vitality. The shortage means fewer jobs, less economic activity, reduced aircraft orders, less service to some communities and no service at all to others.

Fortunately, there are solutions to this issue that are achievable even in today's hyper-partisan world in the form of structured flight training offered by qualified providers using advanced training devices and methodologies and alternative R-ATP pathways as envisioned under the current regulatory framework. We're also asking policymakers for help in opening up financial avenues to support pilot training, including expanding student loan coverage to include flight training, establishing student loan forgiveness programs for pilots and preserving and expanding GI bill funding. A career as a pilot must be an achievable dream for any qualified person and not just a vocation for the wealthy.

We also have a vital stake in the infrastructure debate, including reform of our aging and constrained air traffic control system and a long-term FAA reauthorization. RAA members have spent countless hours walking the halls of Congress, meeting with members and staff. We've been working with the executive branch to make sure the needed reform and reauthorization reflects the reality of our role in the industry, distributes responsibilities and obligations equitably and ensures that all users of the upgraded system are treated fairly.

Public policy, though, is just a small part of our business. In the pages of this report are the stats, stories and people of the RAA. Turn the page, and you're drawn into an industry unlike any other, a never-ending performance – it's also been described as a ballet, an orchestra, a logistical challenge beyond compare – involving people, materials, machines, weather, partners, regulators, vendors, suppliers, passengers and professionals. It's exciting, dynamic, exacting and inspiring. This report explains why so many of us – as the saying goes – have jet fuel in our veins.

Please enjoy this report, and may the coming year bring peace, prosperity and joy to you and yours.

Industry Statistics

2016 At a Glance

The Regional Airline Association (RAA) provides a unified voice for 22 North American regional airlines aimed at promoting a safe, reliable, and robust regional airline industry. The RAA is an important network and convener of regional airlines, business partners, and government regulators – bolstering and promoting the industry and its interests in a changing business and policy environment. As part of that duty, the RAA offers the most robust data and analysis on the regional airline industry available. Here are some of the key findings, which are presented in greater detail in the pages that follow.

22%	Average seating capacity aboard regional aircraft continues to climb. In 2016, the average seating capacity of a U.S. regional aircraft was 62 seats compared to 51 just 10 years ago (a 22% increase).
7%	Average increase in passenger trip length compared to 10 years ago. Regional airlines operated fewer flights and carried less passengers in 2016 than in 2015, but average passenger trip length increased by 2% to 488 miles.
64%	Percentage of U.S. airports with scheduled passenger service to which regional airlines provide the only passenger air service.
95%	Percentage of U.S. airports with scheduled passenger service in 2016 to which regional airlines provided service.
42%	Percentage of all scheduled passenger flights in 2016 operated by regional airlines.
1,955	Total RAA member aircraft, comprised of 1,661 jets (85%) and 294 non-jets (15%).
102	Total number of RAA associate members, which include airframe and avionics manufacturers, suppliers and service providers; flight training providers, universities, and colleges; engine repair, overhaul, and modification providers in the United States and around the world.

Notes:
- 2016 data are preliminary.
- Flight hours, miles, and departures are compiled by the Federal Aviation Administration.
- Since March 20, 1997, aircraft with 10 or more seats used in scheduled passenger service have been operated under 14 CFR 121.
- Years followed by the symbol * are those in which an illegal act was responsible for an occurrenc e in this category. These acts, such as suicide, sabotage and terrorism are included in the totals for accidents and fatalities but are excluded for the purpose of accident rate computation.
- Based on a February 2002 FAA legal interpretation provided to the NTSB, any 14 CFR 135 operation conducted with no revenue passengers aboard will be considered an on-demand flight operation. This interpretation will be applied to accidents beginning with the year 2002.
- It has not been retroactively applied to 36 accidents, nine of them fatal that occurred during the period 1983 – 2001.
- U.S. air carriers operating under 14 CFR Part 135 were previously referred to as Scheduled and Nonscheduled Services. Current tables now refer to these same air carriers as Commuter Operations and On-Demand Operations, respectively, in order to be consistent with definitions in 14 CFR 119.3 and terminology used in 14 CFR 135.1. On-Demand Part 135 operations encompass charters, air taxis, air tours, or medical services (when a patient is on board). U.S. Air Carriers Operating Under 14 CFR 121, Scheduled Service (Airlines)

Regional Aircraft Statistics

· In 2016, RAA members operated 1,955 total aircraft comprised of 1,661 jets (85%) and 294 non-jets (15%).

· The average seating capacity aboard regional aircraft continues to climb. In 2016, the average seating capacity of a U.S. regional aircraft was 62 seats compared to 51 just 10 years ago (a 22% increase).

U.S. Airports & Regional Service

Including Essential Air Service

The following section includes both industry and regional airline specific departure statistics at the nation's Top 50 U.S. airports (both in chart and map form) as well as a map showing those U.S. airports served exclusively by regional airlines.

The Essential Air Service (EAS) program was put into place to guarantee that small communities, that were served by certificated air carriers before airline deregulation, maintain a minimum level of scheduled air service. The U.S. Department of Transportation is mandated to provide eligible EAS communities with access to the National Air Transportation System. This is generally accomplished by subsidizing two round-trips a day with 30-to 50-seat aircraft - or additional frequencies with aircraft with 9-seat or fewer usually to a large or medium-hub airport. The DOT currently subsidizes commuter and certificated air carriers to serve approximately 61 communities in Alaska and 112 communities in the lower 48 contiguous states that otherwise would not receive any scheduled air service.

RICK TOWNSEND

CHAIRMAN, ASSOCIATE MEMBER COUNCIL (AMC)

Dear RAA Members, I hope you all enjoyed the first ever Fall RAA Convention in Palm Beach, Florida and, once again, found the RAA Convention activities to be more productive from both a business and educational standpoint. The RAA Annual Convention still continues to be the leading event in the regional airline industry, providing a showcase for the Regional Airline Association members to demonstrate their products and contributions to the regional airline industry. We can only keep this great convention going forward with the continued support of all RAA airlines and Associate Member companies.

As highlighted in so many industry publications, we continued to be faced with two significant issues that affect our entire regional airline industry – the pilot and technician shortages are only getting worse. The AMC continues to provide support to the RAA to ensure Regional Airlines remain a viable transportation system for the good of America. As you may know, this industry's reach extends well beyond the regional airlines themselves and includes over 146 RAA Associate Member companies that support both economic and job growth.

The AMC and RAA continue to strengthen our industry's future with the Annual Scholarship Program, expanding our reach from a few aviation students to a record breaking 180 + applicants this year with four well deserving winners recently announced. The AMC is increasing both the number and the value of the scholarships through fundraising programs such as the RAA/AMC Golf Tournament and the AMC Silent Auction during the convention.

Finally, some really great news which I am very proud of as I have worked on this objective for many years along with the RAA staff - The 501(c) Foundation Scholarship Fund, which will allow non-taxable donations to the Scholarship Fund, should be up and running in 2018. To all the individuals and companies that donated to the AMC's fundraising campaigns in 2017/2018. Thank You so very much from all of us on the AMC Board!!

In closing, I can't express enough what a privilege it is in my final year as AMC chairman to work with the RAA Staff and all the AMC board members who donate their time in making your RAA better!

RICK TOWNSEND

Raul@lgt.aero

Landing Gear Technologies is proud to be an independently owned company specializing in the repair and overhaul of landing gear systems and a variety of other aircraft components. We started this company with the idea of staying small and concentrating on a limited lineup of regional aircraft. Our goal has always been to put quality and safety above all else and soon our workmanship had our clients requesting that we broaden our capabilities to help support their fleet. Our motto: "Fine workmanship and attention to detail" is what we strive to offer every customer who entrust us with providing our services. Our carefully selected and trained staff is one of the most experienced in the industry; in fact we take such pride in the expertise of our team that our work is backed by the best warranty in the industry.

Pratt & Whitney Canada

1000 Marie Victorin
Longueuil, Quebec J4G 1A1 Canada
http://www.pwc.ca
RAA Representative: Frederic Lefebvre
Vice President, Marketing, Regional Airlines
Frederic.Lefebvre@pwc.ca

"Pratt & Whitney Canada (P&WC) is a wholly owned subsidiary of United Technologies Corporation and a world leader in turboprop, turbofan and turboshaft engines having delivered more than 75,000 engines powering over 28,000 aircraft. Every second, a P&WC-powered aircraft takes off or lands somewhere in the world. P&WC's engines, with close to 600 million hours in the air, are the industry benchmark for innovative design, dispatch reliability, operating economics and easy maintenance. P&WC has long established itself as a major contributor to the success of the regional turboprop airline market with its PT6A, PW100 and PW150 engines. Success began with the PT6A laying a solid foundation for turboprop growth in such 19 passenger turboprops as Raytheon's 1900D. PW100 engines power more than 80% of modern 30-70 passenger aircraft from ATR, Bombardier, Embraer and other manufacturers.

Engine Repair, Overhaul & Modifications

MTU Maintenance Berlin-Brandenburg

Dr.-Ernst-Zimmermann-Strasse 2, 14974
Ludwigsfelde
Germany
http://www.mtu.de
+49 337 8824-0
+49 337 8824-251

MTU Aero Engines is Germany's leading and the country's only independent engine manufacturer and is an established global player in the industry. It engages in the development, manufacture, marketing and support of commercial and military aircraft engines and industrial gas turbines (IGTs). MTU Maintenance is one of the world's largest providers of maintenance services for commercial aircraft engines and industrial gas turbines. MTU Maintenance Berlin-Brandenburg in Ludwigsfelde, Germany, is MTU's center of excellence for the repair of small-size aircraft engines and IGTs. The shop has been an ""Authorized CF34 Service Provider"" for the entire engine family -3, -8, -10 since 2001 and has performed over 1,000 engine repairs, both off-wing and on-wing. MTU also repairs and overhauls Pratt & Whitney Canada (P&WC) engines up to a thrust of 20,000 pounds, like PT6 , PW200, PW300 and PW500. To make sure that the company's maintenance expertise is available worldwide, MTU Maintenance Berlin-Brandenburg has set up mobile repair teams that can reach any point on the globe within the shortest possible timeframe.

C&L Aerospace are a multinational aerospace company specializing in regional aircraft, and more particularly the Saab 340 aircraft. With offices in Australia, Europe, and USA we cover all Saab 340 operators and deal with most of them on a daily basis. We also deal with many Dash 8 and CRJ operators. C&L Aviation Services are an EASA and FAA approved aircraft maintenance facility located in Bangor Maine. We perform maintenance on most regional aircraft including Dash 8, CRJ, and Saab 340. Specializing in the Saab 340 aircraft C&L has a proven track record in maintenance of the Saab 340 aircraft and performs heavy maintenance for a number of operators around the world including being the major provider of maintenance to Saab Aircraft Leasing. Our ability to also supply leased aircraft and engines offer potential customers an unprecedented level of service and resources in the Saab 340 market. Through our MRO we can perform any maintenance required, perform records audits and pre purchase inspections, and refurbish interiors. We can also offer maintenance training and support for new operators entry into service. Through our parts company we can provide initial provisioning of parts and continued parts support through a power by the hour arrangement or exchanging or outright sale of parts. We also manufacture GSE for the Saab 340 and CT7 engine which is kept in stock and available for purchase by new operators. Through our leasing arm we can offer customers the ability to lease or lease/purchase aircraft to accommodate their financial abilities. This level of offering surpasses even the OEM. We are also authorized distribution agents for GKN Aerospace, Barry Controls, GE Aviation Materials, and Amfuel.

State-of-the-Art Simulation, Advancing Safety and Effectiveness

Reliability • Performance
Delivering the Highest Fidelity

FlightSafety International is a world-leading supplier of high-fidelity, advanced-technology training devices – backed by outstanding service and logistics support. We are recognized for our expertise in everything from the design and manufacture of full flight simulators to visual systems and displays for virtually any aircraft. We have delivered more than 1,000 visual systems and 800 flight simulators and advanced training devices. In addition to providing simulators and visual systems to leading commercial, government and military organizations worldwide, we manufacture them for ourselves. They play a vital role in the integrated training system we use throughout our global network of Learning Centers. For unprecedented reliability, ease of systems integration and configuration flexibility, you can trust FlightSafety.

Our New FS1000 Simulator

- Replicates an aircraft's exact flight and performance characteristics with our new electric motion cueing system.
- Includes our VITAL 1100 visual system offering resolutions of more than 12 million pixels.
- Features all-new, large-interior Instructor Operating Station, providing a highly efficient workspace equipped with an intuitive interface, scalable graphics and large multitouch displays.
- Options include CrewView all-glass mirror for superior optical performance and sharper image clarity.

BUILT OVER TIME
TRUST
EARNED EVERY DAY

Aviation professionals from around the world trust us to provide the highest quality training and outstanding service. More than 1,800 highly experienced professional instructors deliver aircraft- and mission-specific courses, using our comprehensive training systems and advanced-technology flight simulators designed to enhance safety. Trust your training to FlightSafety. You'll see why so many aviation professionals make the same choice. And have since 1951.

For information, please call 918.259.4000 or email simulation@flightsafety.com.
